Version 6 Release 1

Nota

Antes de utilizar esta información y el producto al que da soporte, lea la información de la sección "Avisos", en la página 39 y el manual *IBM eServer Safety Information*, G229-9054.

This edition applies to version 6, release 1, modification 0 of IBM i5/OS licensed program (product number 5761-SS1) and to all subsequent releases and modifications until otherwise indicated in new editions. Esta versión no se ejecuta en todos los modelos de sistema con conjunto reducido de instrucciones (RISC) ni tampoco se ejecutan en los modelos CISC.

System i Navigator tasks on the Web

Perform a subset of System i Navigator tasks through an Internet Web browser. The interface might look slightly different, but the tasks you can perform are the same.

The following System i Navigator functions are available to work with on the Web:

- | • **System** (System status, System operator messages, History log, Disk status and more.)
- | • **Basic Operations** (Messages, User jobs, Printers, Printer output, and more.)
- | • **Work Management** (Active jobs, Server jobs, Output queues, Subsystems, and more.)
- | • **Network** (TCP/IP configuration, Remote access services, Servers, IP policies, Internet, i5/OS NetServer, and more.)
- | • **Configuration and Service** (System values, Time management, Disk status, History log, Change password, and more)
- | • **Integrated Server Administration** (All virtual disks, Remote systems, Domains, and more.)
- | • **Security** (Authorization lists, Cryptographic services key management, Intrusion detection, and more.)
- | • **Users and Groups** (Users, Create users, Groups, and more.)
- | • **Database** (Performance monitors, Health center, Databases, and more.)
- | • **Journal Management** (Journals, Journal receivers, Create a journal, and more.)
- | • **Performance** (Investigate data and collections, and more.)
- | • **File Systems** (Integrated file system, File shares, Create file share, and more.)
- | • **Cluster Resource Services** (Displays the list of nodes, Deletes the cluster, and more.)

Nota: To view printer output contents from a Web browser, you need to install the IBM Advanced Function Printing (AFP) Viewer browser plug-in. With the AFP Viewer plug-in you can view AFP and SNA character string (SCS) printer output. To install the plug-in, display the actions for any of the printer output items in a printer output list, and select the **Install AFP Viewer** action. After it is installed, select the **Open** action to view your printer output file contents.

See the following topic, System i Navigator Tasks Available on the Web, to jump to a list of tasks you can perform on the Web.

- | You no longer need to perform any HTTP Server configuration to begin using System i Navigator tasks on the Web. System i Navigator tasks on the Web uses the integrated Web application server, and no longer uses the Websphere system instance. So, you can begin working with System i Navigator tasks on the Web from a Web browser that connects to your System i model. Then, you can gain access to System i Navigator tasks on the Web from the System i Tasks page by visiting the following URL from a Web browser where *hostA* is your System i name:
 - | <http://hostA:2001/webnav/WnServlet?task=home>

After you connect to System i Navigator tasks on the Web, you can add the Web address of any available System i Navigator function you want to regularly view and work with to your Web browser's list of favorite Web pages. Then, you can access these System i Navigator tasks like you access any of your favorite or bookmarked Web pages.

This information is intended to help you start using System i Navigator tasks on the Web by providing tips on how to set up and configure your system to run securely, and by giving you an overview of the functions available.

What's new for V6R1

Read about changed information for the System i Navigator tasks on the Web topic collection. System i Navigator tasks on the Web allow you to work with System i Navigator functions from an Internet Web browser.

- | IBM Systems Director Navigator para i5/OS is a new Web console interface for System i administration where you can work with the Web enabled tasks of System i Navigator. The System i Navigator tasks on the Web which are a set of URL addressable tasks can also be accessed from within the IBM Systems Director Navigator para i5/OS interface. To learn more, see the IBM Systems Director Navigator para i5/OS topic.
- | The list displays System i Navigator tasks on the Web that are new in V6R1. For more information about these and other tasks, see: System i Navigator Tasks Available on the Web

Cómo visualizar las novedades o cambios

Para facilitar la visualización de las novedades o cambio técnicos, en esta documentación se utiliza:

- La imagen para indicar el inicio de información nueva o cambiada.
- La imagen para indicar el final de la información nueva o cambiada.

In PDF files, you might see revision bars (!) in the left margin of new and changed information.

Para encontrar otra información relativa a las novedades o cambios efectuados en este release, consulte el Memorándum para los usuarios.

PDF file for System i Navigator tasks on the Web

You can view and print a PDF file of System i Navigator tasks on the Web information.

To view or download the PDF version of this document, select System i Navigator tasks on the Web (about 151 KB).

Guardar archivos PDF

Para guardar un archivo PDF en la estación de trabajo para su visualización o impresión:

1. Right-click the PDF link in your browser.
2. Click the option that saves the PDF locally.
3. Navigate to the directory in which you want to save the PDF.
4. Pulse **Guardar**.

Cómo bajar Adobe Acrobat Reader

Se necesita Adobe Acrobat Reader para ver o imprimir estos documentos PDF. Puede bajar una copia desde el sitio Web de Adobe (www.adobe.com/products/acrobat/readstep.html) .

Setting up System i Navigator tasks on the Web

To work with System i Navigator tasks on the Web, first make sure your HTTP Server Administration instance is running and that you have properly configured security to meet your needs. Also, you can grant and limit access to System i Navigator with Application Administration.

Before you begin working with System i Navigator functions from an Internet Web browser, you need to make sure that the System i Tasks page on the 2001 port is active, and that you have set up security to meet your needs.

Conceptos relacionados

“Working with System i Navigator tasks on the Web” en la página 12

Working with System i Navigator Tasks from a Web browser helps you access a subset of System i Navigator functions available on the Web. The functions are the same as available on the installed PC client, but have some differences in navigating and performing actions on the Web.

Prerequisites for setting up System i Navigator tasks on the Web

This topic provides information on starting the Administration instance. The Administration instance of the HTTP Server must be running on your system in order to connect to the System i Navigator tasks on the Web interface.

Before you begin working with System i Navigator functions from an Internet Web browser, the Administration instance of the HTTP Server must be running on your system. Compruebe si puede conectarse al puerto 2001 visitando el siguiente URL desde un navegador Web, donde *sistemaprincipalA* es el nombre del sistema:

| <http://hostA:2001/webnav/WnServlet?task=home>

If you can connect to the 2001 port on your system and view the System i Tasks page, then the Administration instance is already running and you can begin configuring security.

Si no puede conectarse al puerto 2001, inicie la instancia Administración del servidor HTTP en el sistema, realizando los siguientes pasos:

To start the HTTP Server Administration instance. follow these steps:

1. In System i Navigator, expand **My Connections** and expand your system.
2. Expanda **Red** → **Servidores** → **TCP/IP** y pulse **Administración HTTP** con el botón derecho del ratón.
3. Click **Start**.
4. Abra un navegador Web y confirme que la instancia de Administración se está ejecutando, visitando el URL <http://sistemaprincipalA:2001>, donde *sistemaprincipalA* es el nombre del sistema.

Nota: You can also use the CL command, STRTCPSVR SERVER(*HTTP) HTTPSVR(*ADMIN), to start the HTTP Server Administration instance.

Tareas relacionadas

“Configuring security for System i Navigator tasks on the Web” en la página 9

If you are accessing the System i Navigator tasks on the Web interface over an external network, such as the Internet, it is recommended that you connect using a secure HTTP connection. Additionally, if the system hosting the System i Navigator tasks on the Web interface resides outside of a firewall, or if you are managing a secondary system outside of a firewall, it is recommended that you also configure the IBM Toolbox for Java to establish secure socket connections for data access.

Configuring security for System i Navigator tasks on the Web

If you are accessing the System i Navigator tasks on the Web interface over an external network, such as the Internet, it is recommended that you connect using a secure HTTP connection. Additionally, if the system hosting the System i Navigator tasks on the Web interface resides outside of a firewall, or if you are managing a secondary system outside of a firewall, it is recommended that you also configure the IBM Toolbox for Java to establish secure socket connections for data access.

It is important to consider the security configuration needed to adequately ensure protection of sensitive data such as user IDs and passwords. The System i Navigator tasks on the Web interface can be configured to require secure connections to not use secure connections, or somewhere in between. By default, the System i Navigator tasks on the Web interface is configured to send warning messages to the user if secure connections are not used. You should evaluate the security needs for your environment and either change the security configuration for the System i Navigator tasks on the Web interface, or configure secure connections.

The kinds of Secure Socket Layer (SSL) connections that you need to consider configuring to run System i Navigator tasks on the Web securely:

1. The first type of SSL connection is used in a connection between a Web browser and the System i model that is hosting System i Navigator tasks on the Web.
2. The second type of SSL connection is used by the System i Navigator tasks on the Web interface to retrieve data from the local System i model and any managed secondary systems.

By default, System i Navigator tasks on the Web is configured to warn users if SSL is not used for all connections. Debe evaluar sus requisitos de seguridad y elegir una o las dos opciones siguientes:

- Configurar y utilizar uno o ambos tipos de conexiones SSL.
- Change the System i Navigator tasks on the Web configuration parameters to treat nonsecure connections differently. Las posibles opciones son hacer necesarias las conexiones SSL, no necesarias, no utilizarlas o avisar.

Hallará más información acerca de los tipos de conexiones y las opciones para utilizarlas, en los siguientes temas:

Tareas relacionadas

“Prerequisites for setting up System i Navigator tasks on the Web” en la página 8

This topic provides information on starting the Administration instance. The Administration instance of the HTTP Server must be running on your system in order to connect to the System i Navigator tasks on the Web interface.

Configuring Web browser connections to System i Navigator tasks on the Web

Ensure that System i Navigator tasks on the Web is configured with the desired behavior for handling SSL or non-secure connections from browsers. Also, if you want to allow or require browser communications to run across a secure connection, you need to configure SSL for the Administration instance of the HTTP Server.

If you do not use secure connections from Internet Web browsers to the System i Navigator tasks on the Web interface, your i5/OS userID and password could be easily accessed by someone else on the network. If an external network, such as the Internet, can be used for browser connections to the System i Navigator tasks on the Web interface, you should use SSL. If you want to allow secure connections from Internet Web browsers to the System i Navigator tasks on the Web interface, you need to set up SSL for the Administration instance of the HTTP Server.

Configuring how System i Navigator tasks on the Web handles HTTP SSL connections

System i Navigator tasks on the Web gives you the ability to require SSL connections from Internet Web browsers to the HTTP Server, or gives you the option to warn users if an SSL connection is not used. If

your system is connected to the Internet, it is recommended that you use SSL. In this case, you might want to just warn users if an SSL connection is not used, or require all browsers to use secure connections. If you are behind a firewall, you might choose to run without SSL. In this case, you can turn off the SSL warnings displayed and the SSL checking performed by the System i Navigator tasks on the Web user interface. If you want System i Navigator tasks on the Web to do something other than warn users if SSL connections are not used by Internet Web browsers, you need to modify the System i Navigator tasks configuration.

To configure how System i Navigator tasks on the Web handles HTTP SSL connections, follow these steps:

1. Click System i Navigator Tasks Configuration page from the System i Navigator tasks on the Web home page (task=home).
2. Select the desired SSL usage for browser connection on the Configuration window, and then click **OK**

Utilice los siguientes valores para cambiar la manera en que se utiliza SSL:

Warning:

Se trata del valor por omisión. The System i Navigator tasks on the Web interface determines if SSL is being used during the current session. If not, it displays a warning message for several seconds, but it still allows the user to connect. If SSL has been used by the browser for the connection to the ADMIN server, no warning is displayed.

Required:

The System i Navigator tasks on the Web interface determines if SSL is being used during the current session. If not, it denies the user access to the application.

Not required:

Both secure and nonsecure connections to the System i Navigator tasks on the Web interface are accepted. The application does not check to see if SSL is being used during the current session.

Tareas relacionadas

Configuring SSL for ADMIN wizard

Configuring data-retrieval connections to the local system and managed secondary systems

Any time System i Navigator tasks on the Web retrieves data from i5/OS, either on the local System i model or any managed secondary systems, the IBM Toolbox for Java is used to create a socket connection for data retrieval.

System i Navigator tasks on the Web works with the IBM Toolbox for Java to establish connections for communicating between i5/OS and the System i Navigator tasks on the Web interface. These connections are used to access data on the local System i model, as well as any managed secondary systems. If the local system running the System i Navigator tasks on the Web interface is not behind a firewall, or if any managed secondary systems you want to access are not behind a firewall, you should configure and use SSL for your IBM Toolbox for Java connections to establish a secure socket connection. Also, ensure that System i Navigator tasks on the Web is configured with the desired behavior for creating and using SSL or non-secure IBM Toolbox for Java connections.

Configure how System i Navigator tasks on the Web uses SSL connections with the IBM Toolbox for Java

System i Navigator tasks on the Web gives you the ability to require SSL connections for communicating between the System i Navigator tasks on the Web interface and i5/OS to attempt to use SSL if possible, to not use SSL, and to warn users if SSL is not used. The configuration of your network determines which setting is right for you. These connections are only used to send data between the System i Navigator tasks on the Web application and i5/OS on the local and any managed secondary systems. If your local System i model and any managed secondary System i models are behind a firewall, you might

choose to not use SSL connections. If you are in a mixed environment with some managed secondary systems behind a firewall and some not, you might want to attempt SSL connections if possible.

If you want System i Navigator tasks on the Web to do something other than always attempt to make SSL connections and warn users if SSL connections are not used, you need to modify the System i Navigator task configuration. To modify the System i Navigator task configuration, follow these steps:

1. Click the System i Navigator Tasks Configuration page from, <http://hostA:2001/webnav/WnServlet?task=home>, the System i Navigator tasks on the Web home page.
2. Select the desired SSL usage for backend system connection setting and then click **OK**.

Nota: You can also directly go to <http://hostA:2001/webnav/WnServlet?task=config> to modify the System i Navigator task configuration.

Utilice los siguientes valores para cambiar la manera en que se utiliza SSL:

Warning:

Se trata del valor por omisión. System i Navigator tasks on the Web uses the IBM Toolbox for Java to establish a secure socket connection. If a secure connection is established, no warning message is displayed. If a secure connection cannot be made, a warning message appears for several seconds, but it still allows the user to connect. This setting displays one warning per session per managed system that a user connects to. Un usuario debe finalizar la sesión y volver a iniciarla para ver de nuevo el mensaje de aviso.

Required:

System i Navigator tasks on the Web uses the IBM Toolbox for Java to establish a secure socket connection. If a secure connection is established, no warning message is displayed. If a secure connection cannot be made, an error message appears and the connection is denied. The user cannot continue with the requested task.

Attempt:

No warning message is displayed, but System i Navigator tasks on the Web will still attempt to establish a secure socket connection using the IBM Toolbox for Java. If a secure connection cannot be established, a nonsecure connection is made.

Not used:

A secure connection is not used and System i Navigator tasks on the Web does not attempt to establish a secure socket connection using the IBM Toolbox for Java. A nonsecure connection is made.

If you make changes to the configuration page, you need to end and restart the integrated Web application server in order for your changes to take effect.

The integrated Web application server is controlled by the HTTP Administration Server. You can stop and restart the HTTP Administration Server by performing the following steps from System i Navigator:

1. In System i Navigator, expand **My Connections** and expand your system.
2. Expanda **Red** → **Servidores** → **TCP/IP** y pulse **Administración HTTP** con el botón derecho del ratón.
3. Click **Stop**.
4. Wait for the status of the HTTP Administration Server in the TCP/IP Servers list to change to **Stopped**. You need to click **Refresh** one or more times to show the changed status.
5. In System i Navigator, right-click **HTTP Administration**.
6. Click **Start** to restart the HTTP Administration Server.
7. Open the Web browser, and confirm that the Administration instance is running by visiting <http://hostA:2001>, where **hostA** is the name of your system.

Nota: You can also use the CL command, ENDTCPSVR SERVER(*HTTP) HTTPSVR(*ADMIN), to stop the HTTP Administration Server and the CL command, STRTCPSVR SERVER(*HTTP) HTTPSVR(*ADMIN), to restart it.

Tareas relacionadas

Configurar JavaToolbox para establecer una conexión de sockets segura

Configuring Application Administration

Use Application Administration to grant and limit user access to the System i Navigator tasks on the Web application, and control access to systems managed from the Web interface. By default, only users with All Object (*ALLOBJ) special authority can access the System i Navigator tasks on the Web application or manage this System i model through a Web task.

- | You can grant and limit access to System i Navigator tasks on the Web with Application Administration from a Web browser by entering the following URL, where *hostA* is your System i name:
 - | **http://hostA:2001/webnav/WnServlet?task=appadmin**
- | Alternatively, you can also grant and limit access to System i Navigator tasks on the Web with Application Administration by following these steps from the installed PC client:
 1. In System i Navigator, expand **My Connections**.
 2. Pulse con el botón derecho del ratón en su sistema y seleccione **Administración de aplicaciones** → **Valores locales**.
 3. Select the **Host Applications** tab and expand **System i Navigator tasks on the Web**.

Under System i Navigator tasks on the Web, you can grant or limit access for the following:

Manage System Through Web Interface

Specifies that this system can be managed through any System i Navigator task performed from the Web, regardless of which system is hosting the System i Navigator tasks on the Web application. El valor por omisión se establece en Acceso a todos los objetos.

Use of System i Navigator Web Interface

Specifies to grant or limit access to the System i Navigator Web application. El valor por omisión se establece en Acceso a todos los objetos.

Configure System i Navigator Web Interface

Specifies to grant or limit access to the System i Navigator Web configuration (task=config, or click **Configuration** on the home page). El valor por omisión se establece en Acceso a todos los objetos.

The Application Administration information has details about how to grant and limit user access to System i Navigator functions.

Working with System i Navigator tasks on the Web

Working with System i Navigator Tasks from a Web browser helps you access a subset of System i Navigator functions available on the Web. The functions are the same as available on the installed PC client, but have some differences in navigating and performing actions on the Web.

After you set up System i Navigator tasks on the Web, you can begin working with a subset of System i Navigator functions from a Web browser. To begin working with System i Navigator tasks on the web, follow these steps:

1. Click **View All Tasks** from the home page.

2. Specify the system from the tasks page and optionally specify a database and schema if you want to use database objects.
3. Pulse **Aceptar** para abrir la página de tareas.
4. Select the tab associated with the category you want to work with from the tasks page.
5. Click the on list or action you want to work with.

After you create the URL, you can add it to your Web browser's list of favorites and access this System i Navigator task like you access any of your favorite Web pages. To add a System i Navigator task to the list of favorites, follow these steps:

1. Click **Create Favorites...** from the Home page, and a wizard generates an HTML file that contains all the System i Navigator tasks for your System i model.
2. Click **Save Favorites HTML** at the end of the wizard. You can, then, store the HTML file in the directory of your choice.

You can import this file into your Web browser to create a list of favorites for every System i Navigator task on the Web. To import a file in Internet Explorer, follow this step:

1. Select **File --> Import and Export**, and then follow the wizard's instructions.

If you are familiar with System i Navigator, then you will recognize that the functions available to work with on the web are the same functions available on the installed PC client. Aunque las funciones son las mismas, hay diferencias entre navegar y realizar acciones en la Web y navegar y realizar acciones en el cliente PC instalado.

If you want more information about the System i Navigator functions available on the Web, see the following information center topics:

Basic operations

- Mensajes
- Working with printer output
- Trabajos

Work management

- Managing jobs and threads
- Managing output queues
- Managing subsystems

| Networking

- TCP/IP servers

| Application administration

- Setting up application administration

Configuration and service

- System values
- Time management

| Security

- Cryptography
- Intrusion detection
- Planning and setting up system security > Planning your security strategy > Panning resource security > Planning authorization lists

Bases de datos

You can access the following database objects and most of their associated System i Navigator database functions using the Web interface:

- Esquemas
- Tablas
- Particiones de tablas
- Aliases
- Índices
- Diarios
- Journal receivers
- Secuencias
- Tipos diferenciados
- Funciones
- Paquetes
- SQL procedures
- Desencadenantes
- Restricciones

| Performance

- IBM i5/OS disk watcher
- IBM i5/OS job watcher

| Journal management

- Setting up journaling
- Managing journals

| Files and file systems

- Integrated file system
- File shares

| Users and groups

- User and group tasks

| Integrated server administration

- iSCSI attached System x and blade systems

“Setting up System i Navigator tasks on the Web” en la página 8

To work with System i Navigator tasks on the Web, first make sure your HTTP Server Administration instance is running and that you have properly configured security to meet your needs. Also, you can grant and limit access to System i Navigator with Application Administration.

“Working with System i Navigator lists on the Web” en la página 35

Although you can work with the same function on the Web as you can on the installed client, the interface used to work with System i Navigator tasks on the Web is different from the interface on the installed client.

Basic system operations

This topic collection introduces some of the key concepts and tasks required for System i basic operations. Many of these topics provide an introduction and example, and then suggest further resources for more detailed or advanced information.

Work management

Work management is an important building block within the i5/OS® operating system. Its functions are the foundation through which all work enters the system, is processed, run, and completed on System i™ Navigator products.

Redes

Learn how to connect your business to the Internet, configure e-mail, and serve multimedia objects to Web browser clients. You can integrate file and print services, user profile management, and network operations. Find information about the Windows® server that can be integrated into the system, and read about security offerings that can help protect your resources.

Valores del sistema

System values are pieces of information that affect the system operating environment. System values are not objects on the system. Rather, system values contain control information for the operation of certain parts of the system.

Gestión de la hora

Within the time management component of System i™ Navigator, you can work with the time zone and time adjustment functions. With these functions, you can choose a time zone for your system to use and adjust the system time.

Administración de bases de datos

DB2® for i5/OS® provides various methods for setting up and managing databases.

Administración de aplicaciones

Application Administration is an optionally installable component of System i™ Navigator.

Administrators can use Application Administration to control the functions and applications available to users and groups on a specific system.

Planning authorization lists

You can group objects with similar security requirements by using an authorization list.

Cryptography

IBM® offers several i5/OS® cryptography solutions. A comprehensive cryptography solution is an important part of a successful security strategy. IBM offers both software cryptography and a family of cryptographic hardware options for protecting data and for securing transaction processing.

Intrusion detection

The intrusion detection and prevention system (IDS) notifies you of attempts to hack into, disrupt, or deny service to the system. IDS also monitors for potential extrusions, where your system might be used as the source of the attack. These potential intrusions and extrusions are logged as intrusion monitor audit records in the security audit journal and displayed as intrusion events in the Intrusion Detection System graphical user interface (GUI). You can configure IDS to prevent intrusions and extrusions from occurring.

Rendimiento

Monitoring and managing your system's performance is critical to ensure you are keeping pace with the changing demands of your business.

IBM Systems Director Navigator para i5/OS

IBM® Systems Director Navigator for i5/OS® is a Web console interface for System i™ administration where you can work with the web enabled tasks of System i Navigator. IBM Systems Director Navigator for i5/OS includes a number of welcome pages that allow you to quickly find the task that you want to perform.

Integrated file system

The integrated file system is a part of the i5/OS® operating system that supports stream input/output and storage management similar to personal computer and UNIX® operating systems, while providing you with an integrating structure over all information stored in the system.

File shares

An i5/OS® NetServer™ file share is a directory path that i5/OS NetServer shares with clients on the network.

Integración de System i con BladeCenter y System x

An integrated server is a combination of integrated server hardware, network components, virtual disks, shared devices, and i5/OS integrated server configuration objects.

Tareas relacionadas

Journal management

Journal management provides a means by which you can record the activity of objects on your system. When you use journal management, you create an object called a journal. The journal records the activities of the objects you specify in the form of journal entries. The journal writes the journal entries in another object called a journal receiver.

"System i Navigator URL parameters and available Web tasks"

The predefined URL parameters and URL abbreviations for the available Web tasks help you create unique URLs to work with different System i Navigator Web tasks.

System i Navigator tasks on the Web reference information

While the tasks you work with from the web are the same tasks you can perform within the System i Navigator client application, the interfaces are slightly different. This topic provides information about how the predefined URL parameters and URL abbreviations can help you use the System i Navigator tasks on the Web interface more efficiently, and how you can perform actions on System i Navigator functions from the Web.

System i Navigator URL parameters and available Web tasks

- | The predefined URL parameters and URL abbreviations for the available Web tasks help you create unique URLs to work with different System i Navigator Web tasks.

Each System i Navigator task that you work with has its own unique URL that displays in your Internet browser's Address field. Cada URL se crea siguiendo un conjunto predefinido de convenios que incluyen el nombre del sistema principal, el puerto, el nombre de la aplicación y el nombre de la tarea con la que desea trabajar.

URL parameters

Nombre de parámetro	ID de parámetro	Descripción	Ejemplo
Tarea	task	La tarea de URL que desea realizar	Si desea trabajar con los trabajos activos en el sistema principal A: <code>http://sistemaprincipalA:2001/webnav/WnServlet?task=actjob</code>
Sistema	&system	Especifica el sistema que desea gestionar. Este parámetro es opcional y sólo debe especificarse si desea trabajar con las tareas de un sistema principal secundario.	If you want to use System i Navigator tasks on the Web on hostA but work with active jobs on hostB: <code>http://sistemaprincipalA:2001/webnav/WnServlet?task=actjob&system=sistemaprincipalB</code>
Usuario	&user	Permite especificar un ID de usuario diferente si trabaja en un sistema principal secundario.	Si desea utilizar un ID de usuario diferente en un sistema principal secundario: <code>http://sistemaprincipalA:2001/webnav/WnServlet?task=actjob&system=hostB&&user=userB</code>
Filtro y clasificación	&filter and sort	Puede especificar si se permite o se cancela el filtrado y la clasificación en una tarea seleccionada	Si desea desactivar la capacidad para filtrar y clasificar: <code>http://sistemaprincipalA:2001/webnav/WnServlet?task=actjob&filter-allowed=false&&sort-allowed=false</code>

Nombre de parámetro	ID de parámetro	Descripción	Ejemplo
Tamaño de tabla	&table-size	Especifica el número de elementos por página que se muestran en una tabla en línea	Si desea cambiar el número de trabajos activos que se muestran por página de 20 a 100: <code>http://sistemaprincipalA:2001/webnav/WnServlet?task=actjob&table-size=100</code>
Clasificación de columnas	&column-sort=x-A/D Donde x = ID de columna. A=Ascendente D=Descendente	Allows you to pre-sort an System i Navigator list.	Por ejemplo, puede que desee visualizar la lista de trabajos activos clasificados por CPU% en orden descendente. Esto permite visualizar rápidamente qué trabajos están utilizando la mayor cantidad de CPU. Los parámetros del URL serán los siguientes: <code>&task=actjob&column-sort=8-D</code> . Para visualizar los ID de columna de una lista específica, visualice la lista en la web, seleccione la acción Columnas para la lista y pulse Mostrar los ID de columna para visualizar el ID de cada columna.
TaskMode único	&WnSTM	Especifica si una petición URL nueva en la misma sesión de navegador cierra automáticamente la petición anterior. El valor por omisión es WnSTM=True	Si desea utilizar un navegador Web que comparta la misma sesión (por ejemplo, Netscape), debe establecer este parámetro en false para lanzar más de una tarea a la vez: <code>http://sistemaprincipalA:2001/webnav/WnServlet?task=actjob&WnSTM=false</code>

System i Navigator tasks available on the Web

The System i Navigator tasks home page is a starting place if you are just learning how to use these tasks on the web. From the home page, you can:

- View all available System i Navigator tasks
- Start a wizard to help select the desired System i Navigator task
- Create the html for favorites for all of the System i Navigator tasks
- Change configuration settings
- Learn more about System i Navigator tasks on the web by linking to the i5/OS Information Center

With the Trace Levels page, you can customize your log file and adjust the trace levels. Use the User preferences page to select default values for System i Navigator tasks.

The task abbreviations that are used in the URLs below are similar to the i5/OS commands. The following table shows the URL abbreviations for the System i Navigator tasks that are available on the Web.

General System i Navigator tasks		
Nombre de tarea	ID de tarea (task=xxxx)	Additional parameters
Home page	home	
View all tasks	list	system=nombre de sistema, userid=ID de usuario, dbname=nombre de base de datos, schema=nombre de esquema
Trace levels	trace	error, warning, diag, info, comp, level, create, entryExit, perf. (Each parameter supported for the trace task can have a value of true or false, for example, ... task=trace&info=true&diag=false.)
System i Navigator Tasks Home Page	home	
User preferences	pref	
Configuration options	config	

General System i Navigator tasks		
Nombre de tarea	ID de tarea (task=xxxx)	Additional parameters
View log files	logfiles	
Work with jobs	wrkjobs	
Work with messages	wrkmsgs	
Trabajar con salida de impresora	wrkprtout	

Sistema		
Nombre de tarea	ID de tarea (task=xxxx)	Parámetros adicionales
Disk Status	dsksts	
System Status	syssts	
Change password	chgpwd	
Run Command	runcmd	
History log	dsplog	strdate, strtime, enddate, endtime, jobs, msgids
Application Administration (Local and Central Settings)	appadmin	type
Application Administration properties	appadminprop	

Table notes:

1. Sample parameter values for dsplog task are:

```
strdate=*BEGIN, strdate=*CURRENT, strdate=05/25/04
strtime=*AVAIL, strtime=10:00:00, strtime=15:30:00
enddate=*END, strdate=*CURRENT, strdate=05/25/04
endtime=*AVAIL, endtime=10:00:00, endtime=15:30:00
jobs=*ALL, jobs=QPADEV0006, jobs=QPADEV0006,QPADEV0004
jobs=TLK/QDFTJOBD, jobs=145678/TLK/QDFTJOBD
jobs=145678/TLK/QPDFTJOBD,222555/TLK/QPADEV0007
msgids=*ALL, msgids=CPF3345, msgids=CPF1124, CPF1164
```
2. Sample parameter for appadmin task are:

```
type=central, type=local
```

Operaciones básicas		
Nombre de tarea	ID de tarea (task=xxxx)	Parámetros adicionales
Mensajes	msg	msgq, severity, type, foruser
Enviar un mensaje	sndmsg	
Mensajes QSYSMSG	qsysmsg	severity, type
Mensajes del operador del sistema	sysoprmsg	severity, type
Salida de impresora	prtout	printer, outq (1), users (3) form, userdata, job, jobsystem, created (8), fromdate, fromtime, todate, totime, status (7)
Retener salida de impresora	hldprtout	file, job, splnbr, jobsysname, crtdate, crttime (5)

Operaciones básicas		
Nombre de tarea	ID de tarea (task=xxxx)	Parámetros adicionales
Liberar salida de impresora	rlsprtout	file, job, splnbr, jobsysname, crtdate, crttime (5)
Visualizar salida de impresora	dspprtout	file, job, splnbr, jobsysname, crtdate, crttime (5)
Move printer output	movprtout	file, job, splnbr, jobsysname, crtdate, crttime (5)
Delete printer output	dltprtout	file, job, splnbr, jobsysname, crtdate, crttime (5)
Propiedades de salida de impresora	prtoutprop	file, job, splnbr, jobsysname, crtdate, crttime (5)
Convertir salida de impresora a PDF	cnvprtout	file, job, splnbr, jobsysname, crtdate, crttime (5)
Responder a un mensaje de salida de impresora	rpyprtout	file, job, splnbr, jobsysname, crtdate, crttime (5)
Impresoras	prt	printer (4)
Add a printer	addprt	prompt, addr, url, dns, ipds, rmtoutq (9)
Delete a printer	dltprt	printer
Create a printer share	crtprtshr	
Printer share properties	prtshrp	printer, shrname
Stop sharing a printer	stopprtshr	printer, shrname
Retener una impresora	hldprt	printer
Liberar una impresora	rlsprt	printer
Iniciar una impresora	startprt	printer
Detener una impresora	stopprt	printer
Reiniciar una impresora	restartprt	printer
Propiedades de impresora	prtprop	printer
Hacer disponible una impresora	availprt	printer
Hacer no disponible una impresora	unavailprt	printer
Visualizar salida de una impresora	openprt	printer
Responder a un mensaje de impresora	rpyprt	printer
Trabajos de usuario	usrjob	jobname, jobuser, jobnbr, type (2), status (6), jobq
Run command	runcmd	

Operaciones básicas		
Nombre de tarea	ID de tarea (task=xxxx)	Parámetros adicionales
Table notes:		
1. You must enter the outq value as library/queue. Ejemplo: outq=qusrsys/qezjoblog.		
2. Los tipos válidos para la lista de trabajos de usuario son: A (Inicio automático), B (Por lotes), I (Interactivo), M (Subsistema), R (Lector), S (Sistema), W (Transcriptor), X (Sistema SCPF) y * (Todos)		
3. It is *current, *all, or up to 20 individual users separated by commas		
4. It is an individual printer name, or a wild card (name*)		
5. The crtdate format is YYYYMMDD and the crttime format is HHMMSS.		
6. The valid values for the statu" parameter for task=usrjob are: *ALL, *ACTIVE, *JOBQ, *OUTQ		
7. The valid values for the status parameter for task=prtout are:		
8. The valid values for the created parameter are: *ALL, and *SPECIFIC. If *SPECIFIC is specified, the fromdate, todate, fromtime, and totime values are retrieved. The fromdate and todate format is YYYYMMDD. The fromtime and totime format is HHMMSS.		
<ul style="list-style-type: none"> • MSGW Mensaje en espera • HLD Retenido • CLO No preparado • DFR Diferido • SND Enviando • OPN Creándose • RDY Preparado para imprimir • PND Preparando impresión • WTR Enviando a impresora • PRT Enviado a impresora • FIN Impresión finalizada • SAV Impreso y guardado • *ALL Todos 		
9. Valid values for addprt task parameters are described in Table 1.		
<p>Note: To view printer output contents from a web browser, you need to install the IBM Advanced Function Printing (AFP) Viewer browser plug-in. With the AFP Viewer plug-in you can view AFP and SNA character string (SCS) printer output. To install the plug-in, display the actions for any of the printer output items in a printer output list, and select the Install AFP Viewer action. After it is installed, select the Open action to view your printer output file contents.</p>		

Tabla 1. Valid values for **addprt** task parameters

Parameter	Descripción	Possible values
prompt	Display prompt panels	yes, no (Default to yes)
addr	TCP/IP address of printer	Valid TCP/IP address
url	URL	Valid URL
dns	DNS printer name	Valid DNS name
ipds	Printer is capable of printing IPDS	yes, no (Default to no)
rmtoutq	Configure printer as remote output queue	yes, no (Default to no)

Gestión de trabajos		
Nombre de tarea	ID de tarea (task=xxxx)	Parámetros adicionales
Trabajos activos	actjob	jobname, jobuser, jobnbr, curuser, subsystem, type (1)
Trabajos servidores	svrjob	jobname, jobuser, jobnbr, status (3), curuser
Suprimir un trabajo	dltjob	job jobNbr/jobUser/jobName
Propiedades del trabajo	jobprop	job jobNbr/jobUser/jobName
Visualizar las anotaciones de un trabajo	joblog	job jobNbr/jobUser/jobName
Visualizar objetos bloqueados de un trabajo	lockobj	job jobNbr/jobUser/jobName
Visualizar pila de llamadas de un trabajo	callstack	job jobNbr/jobUser/jobName
Visualizar archivos abiertos de un trabajo	openfiles	job jobNbr/jobUser/jobName
Visualizar lista de bibliotecas de un trabajo	liblist	job jobNbr/jobUser/jobName
Visualizar estadísticas de rendimiento de un trabajo	perfstats	job jobNbr/jobUser/jobName
Visualizar hebras de un trabajo	threads	job
Retener un trabajo	hldjob	job jobNbr/jobUser/jobName
Liberar un trabajo	rlsjob	job jobNbr/jobUser/jobName
Mover un trabajo	movjob	job job=jobNbr/jobUser/jobName
Trabajar con un trabajo	wrkjob	job jobNbr/jobUser/jobName
Subsistemas activos	sbs	
Colas de trabajos activas	actjobq	
Todas las colas de trabajos	alljobq	jobq (2)
Retener una cola de trabajos	hldjobq	jobq
Liberar una cola de trabajos	rlsjobq	jobq
Borrar una cola de trabajos	clrjobq	jobq
Colas de salida	outq	outq (4)
Create a share for an output queue	crtoutqshr	outq
Output queue share properties	outqshprop	outq, shrname
Stop sharing an output queue	stopoutqshr	outq, shrname
Retener una cola de salida	hldoutq	outq (5)
Liberar una cola de salida	rlsoutq	outq (5)
Borrar una cola de salida	clROUTQ	outq (5)
Active Memory Pools	actpool	
Agrupaciones de memoria compartidas	shrpool	

Gestión de trabajos		
Nombre de tarea	ID de tarea (task=xxxx)	Parámetros adicionales
Table Notes:		
1.	Valid types for the active jobs list are A (Autostart), B (Batch), C (Communications), I (Interactive), P (Prestart), M (Subsystem), R (Reader), S (System), W (Writer), and * (All)	
2.	The jobq value must be entered as library/queue, for example, jobq=tk/tlkjobq, jobq=*all/t*.	
3.	Valid values for the status parameter are *ALL, *ACTIVE, *OUTQ.	
4.	The outq value for the outq task must be entered as library/queue, for example, outq=qusrsys/qezjoblog. Also, a wildcard value can be entered for the queue name, for example, outq=*ALL/s* to show all output queues that start with the letter s.	
5.	The outq value must be entered as library/queue, for example, outq=qusrsys/qezjoblog.	

Configuración y servicio		
Nombre de tarea	ID de tarea (task=xxxx)	Parámetros adicionales
Valores del sistema	sysval	
Gestión de la hora	timemgmt	
Lists disk units	dskunit	
Lists frame / units	dskloc	
Lists disk pools	dskpool	
Lists disk pool groups	dskpoolgrp	
Lists parity sets	paritysets	
Add Disk Unit	adddskunit	
New Disk Pool	crtddskpool	
Move disk units	movdskunit	
Remove disk units	rmvdskunit	
Start parity	startparity	
Stop parity	stopparity	
Include disk unit in a parity set	incdskunit	
Change parity set optimization	chgparity	
Replace disk unit	repldskunit	
Nonconfigured disk units	noncfgdsk	

Table Notes:

- 1. The Install Disk Unit task is removed from the Web but can be performed from the installed PC client.
- 2. The sample parameter values for dsplog task are:
 - strdate=*BEGIN, strdate=*CURRENT, strdate=20040525
 - strtime=*AVAIL, strtime=100000, strtime=153000
 - enddate=*END, strdate=*CURRENT, strdate=20040525
 - endtime=*AVAIL, endtime=100000, endtime=153000
 - jobs=*ALL, jobs=QPADEV0006, jobs=QPADEV0006,QPADEV0004
 - jobs=TLK/QDFTJOBD, jobs=145678/TLK/QDFTJOBD
 - jobs=145678/TLK/QPDFTJOBD,222555/TLK/QPADEV0007
 - msgids=*ALL, msgids=CPF3345, msgids=CPF1124, CPF1164

The strdate format is YYYYMMDD and the strtime format is HHMMSS.

The enddate format is YYYYMMDD and the endtime format is HHMMSS.

“Working with System i Navigator tasks on the Web” en la página 12

Working with System i Navigator Tasks from a Web browser helps you access a subset of System i Navigator functions available on the Web. The functions are the same as available on the installed PC client, but have some differences in navigating and performing actions on the Web.

“Working with System i Navigator lists on the Web”

Although you can work with the same function on the Web as you can on the installed client, the interface used to work with System i Navigator tasks on the Web is different from the interface on the installed client.

Working with System i Navigator lists on the Web

Although you can work with the same function on the Web as you can on the installed client, the interface used to work with System i Navigator tasks on the Web is different from the interface on the installed client.

The following information describes how to take action on a System i Navigator task or function from a Web browser, and also provides tips for how to change the way System i Navigator items are displayed in the online list view.

Nota: It is important to log out after you are finished using System i Navigator tasks on the Web. When you log out, the system has a chance to close connections and free resources, which makes more memory available to other applications.

Performing actions on a System i Navigator list

To perform actions on a System i Navigator list, you can take action on:

Toda la lista

Actions that apply to the entire System i Navigator list, such as **Include** and **Columns**, can be found in the **Select Action** menu at the top of the list. Seleccione la acción y pulse **Continuar** para realizarla. No es necesario seleccionar elementos de la lista antes de realizar estos tipos de acciones.

Un solo elemento

Para realizar una acción sobre un solo elemento de la lista, pulse el icono de menú situado junto al nombre del elemento. This displays a context menu where you can select the desired action.

Varios elementos

Para realizar una acción sobre varios elementos de la lista, selecciónelos pulsando el recuadro de selección situado a la izquierda de sus nombres. Los elementos con los que desea trabajar quedarán resaltados. Para realizar la acción, siga uno de estos procedimientos:

- Select the desired action from the **Select Action** field at the top of the list, and click **Go**.
- Click the menu icon that is located next to the item name of one of the selected items. This displays a context menu where you can select the desired action

Cada uno de los elementos de la lista

To perform an action on every item in the list, click the **Select All** icon at the top of the list, and then click the menu icon that is located next to one of the item names. This displays a context menu where you can select the desired action

Funciones de tabla disponibles en la Web

The table functions available on the Web are:

Buscar

The Web table supports a find function, which has more capability than the Find supported within the System i Navigator client. You can do the following from the Web table:

- Specify these different conditions: contains, starts with, ends with, exact match

- Limitar la búsqueda a una columna específica o buscar en todas las columnas
- Buscar en sentido ascendente o descendente en la lista
- Specify whether to match the case
- Especificar que se visualice o se oculte la barra de herramientas Buscar

Filtrado

List filtering is provided for all System i Navigator lists on the web, regardless of whether the component that provides the list supports an include function. It should be noted that, unlike the include function, filter settings for lists are not remembered for subsequent uses of the list. This filtering function supports the following:

- Soporta el filtrado de una o varias columnas de la lista
- Supports the following filter conditions for text columns (a match case option can be applied to all of these conditions) :
 - Contiene
 - Empieza por
 - Termina en
- Soporta las siguientes condiciones de filtrado para columnas numéricas:
 - Todos los números
 - Números inferiores a xxx
 - Números inferiores o iguales a xxx
 - Números superiores a xxx
 - Números superiores o iguales a xxx
 - Números iguales a xxx
 - Números no iguales a xxx
 - Números entre xxx eyyy
 - Números entre xxx eyyy inclusive

Clasificar

The built-in data sorting allows you to do the following:

- Especificar hasta tres columnas de la lista para clasificarla tomándolas como referencia
- Especificar una clasificación ascendente o descendente para cada una de las columnas

List navigation

The Web table allows easy navigation throughout the list by supporting the following:

- Botones Siguiente y Anterior para desplazarse por la lista.
- Desplazamiento a una página específica de la lista
- Contraer o expandir toda la lista

Nota: If you want to modify the number of entries per page that display in a list, you can use the Table size parameter (&table-size).

Añadir o eliminar selecciones para todos los elementos de la lista

Puede añadir fácilmente una selección a todos los elementos de la lista o eliminar selecciones de todos los elementos de la lista pulsando un ícono de la barra de herramientas situado en la parte superior de la tabla web.
