

IBM i Service Provider Monthly Licensing Offering – Usage Data

IBM does not require or recommend a specific tool for tracking usage of IBM i. Here are some options:

- [Work with License Information](#) (WRKLICINF) gives peak usage of IBM i programs each month.
- [Collection Services](#) data shows IBM i usage and cores used over time. You can use tools like IBM Navigator for i ([IBM Navigator for i Performance interface](#)) or [iDoctor](#) (an IBM Lab Services offering) to visualize this data.
- Cloud Management Console (CMC) shows core usage of partitions over time. The CMC Capacity Monitoring app shows this information for any partition connected to CMC.
