

Securing the server in a rack

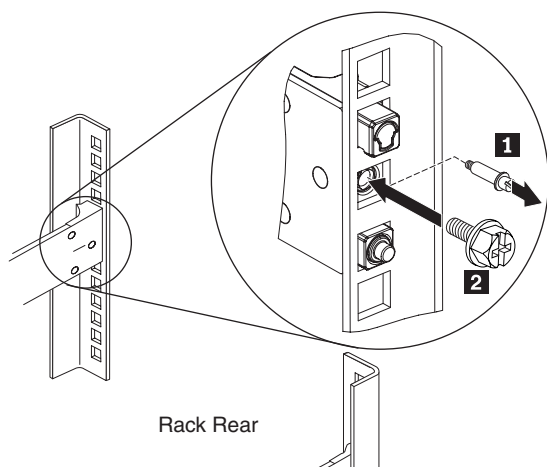

Statement 36:

CAUTION:

Always install the slide retention screw.

After you install the server or memory expansion module slide rails in a rack, you must install a slide retention screw into the rear of each slide rail to secure the device. If you have already installed a cable-management arm, you might have to remove it to install the slide retention screw and then reinstall the cable-management arm.

To secure the server or memory expansion module in a rack, complete the following steps:

1. Use a flat blade screwdriver to remove the screw **1** from the rear of the slides.
2. Replace the screw with a 10-32 **2** (slide retention) screw, included with this kit.
