- Step 5: Slide GPU into GPU tray with card aslant
- Step 6: Slide GPU into GPU tray
- Step 7: Slide GPU into GPU tray and seat fully into PCIe slot
- Step 8: Reinstall EMI bottom cover

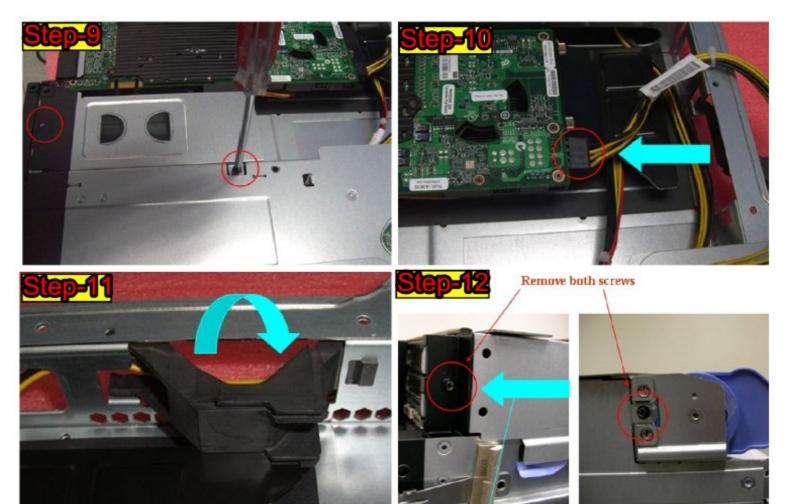

- Step 9: Re-install screws and snug tight (Please use this torque : 6 In-lbs)
- Step 10: Plug GPU power cable and route cable
- Step 11: Lock PCI holder
- Step 12: Remove right-side slots retaining cover (Please use this torque : 6 In-lbs)

 Step 1: Slide M1060 halfway into side bay

Check point 1:

- M1060 extender in the groove of blue retainer bracket.

- Power cable for M1060 is not tangled (not yet connected to M1060).

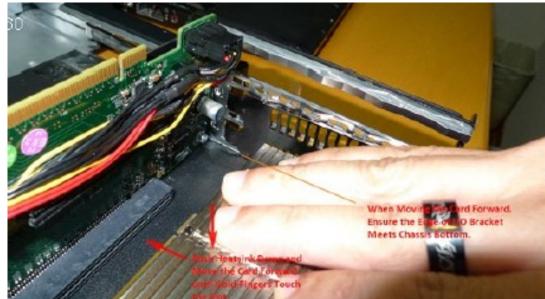

• Step 2:

Push the heatsink down and move the card forward until the gold fingers stop at the slot on the riser card.

- Check point 2:

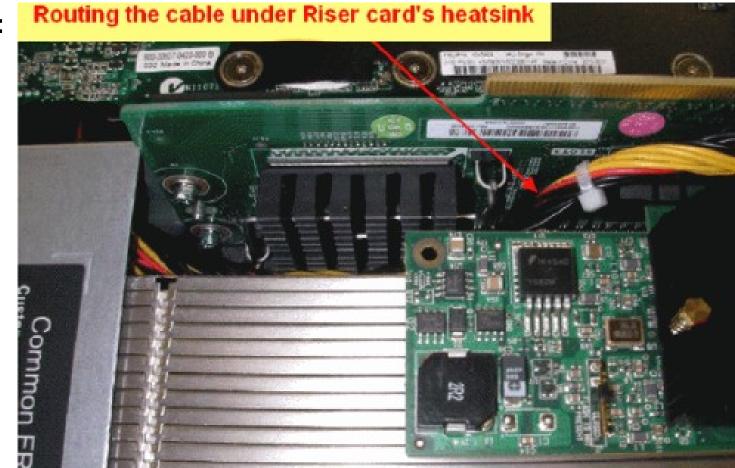

While forwarding the card, ensure the edge of I/O bracket meets chassis bottom.
Do not lift M1060 during

this step.

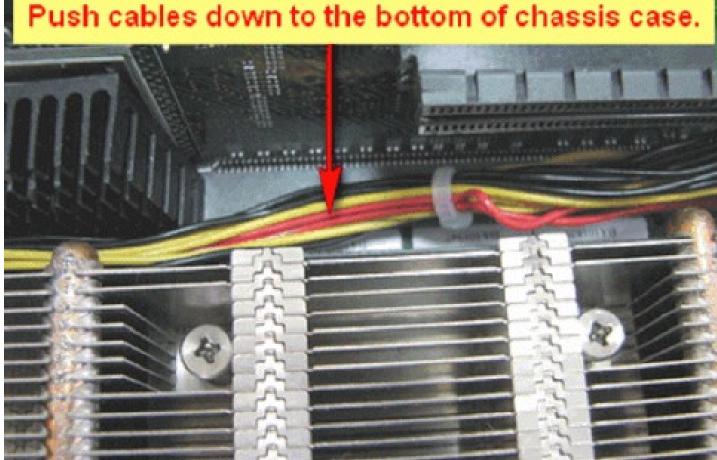

Step 3:

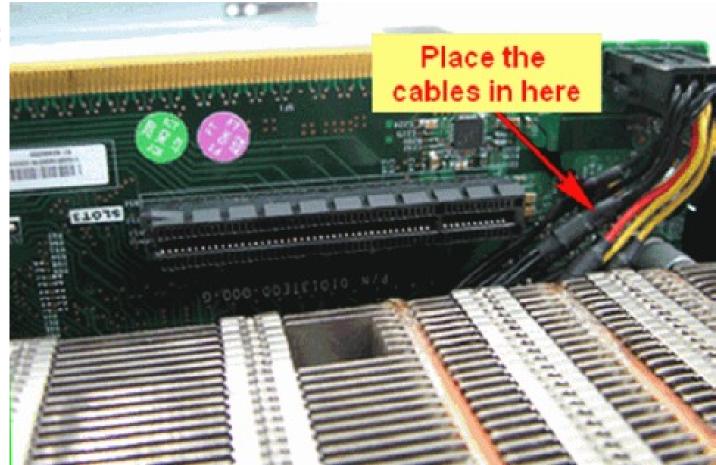

Step 4:

Step 6: Push M1060 gently into slot

- Check point 3:
- # Do not lift M1060 during this step.

Check if screw holes on M1060 and chassis aligned. Or EMI shield (blue line) is not higher than I/O bracket (red line).

More illustrations on the next page for the definitions of the lines.

Check Points

- Do not lift M1060 during this step.
- Check if screw holes on M1060 and chassis aligned. Or,
- EMI shield (blue line) is not higher than I/O bracket (red line). More illustrations on the next page for the definitions of the lines.

• Step 7:

Connect power cable and screw side cover on (Please use this torque : 6 In-lbs)
