

This IBM labeled 1.5V Memory Option may contain DIMMs that have been qualified by IBM to operate at 1.35V or 1.5V.

All DIMMs capable of 1.35V operation are marked with the industry designator "PC3L" e.g. PC3L-10600 for a DDR3-1333 DIMM. IBM labeled PC3L DIMMs will operate at 1.5V when placed in a system that only operates DIMMs at 1.5V, or when mixed with 1.5V DIMMs.

There is no difference in function or performance between 1.5V DIMMs and 1.35V DIMMs running at 1.5V in the same system.
