

Consolidated Service Test

CST4Q23 (RSU2312)

January 3, 2024

Prepared by: CST Team

As part of IBM's commitment to quality and continuous improvement, IBM established the Consolidated Service Test (CST) team consisting of cross product test representatives. CST enhances the way IBM tests and recommends maintenance packages for z/OS software, including the major subsystems. In the past, many of the key product families on the z/OS software stacks had different recommended maintenance strategies, with little or no coordination between them. CST has been put in place to address this issue so that you can obtain and install the recommended PTF service level from the CST Web site for z/OS and their key subsystems consolidated into one package. This means you will receive a tested level of service for all of the following products/tools:

- z/OS
- CICS Transaction Server for z/OS
- Db2 for z/OS
- GDPS/Metro and GDPS/MGM
- IMS
- IRLM
- JAVA
- WebSphere Application Server for z/OS
- IBM MQ for z/OS
- z/OS Management Facility

Note: For a complete list of products/tools and levels tested, please refer to the *What Service was Installed* section.

We provide these recommendations free of charge to all z/OS customers. Note that CST testing is performed in addition to existing test criteria and does not replace any current Quality Assurance processes performed by other products.

What Service was Installed:

NOTE: Refer to Appendix A for a list of the excluded maintenance due to unresolved PE fixes.

Product/Tool	Maintenance Level
- CICS TS 6.1 - CICS TS 5.6 - CICS Interdependency Analyzer for z/OS V3.2	All service through the end of September 2023 not already marked RSU. PE resolution and HIPER/Security/Integrity/Pervasive PTFs and their associated requisites and supersedes through the end of November 2023.
- Db2 V12 - Db2 V13	All service through the end of September 2023 not already marked RSU. PE resolution and HIPER/Security/Integrity/Pervasive PTFs and their associated requisites and supersedes through the end of November 2023.
- GDPS V4.5.0 - GDPS V4.6.0	All service through the end of September 2023 not already marked RSU. PE resolution and HIPER/Security/Integrity/Pervasive PTFs and their associated requisites and supersedes through the end of November 2023.
- IMS V15 - IMS V15.2 - IMS V15.3	All service through the end of September 2023 not already marked RSU. PE resolution and HIPER/Security/Integrity/Pervasive PTFs and their associated requisites and supersedes through the end of November 2023.
- IRLM 2.3	All service through the end of September 2023 not already marked RSU. PE resolution and HIPER/Security/Integrity/Pervasive PTFs and their associated requisites and supersedes through the end of November 2023.
JAVA Technology Edition - IBM 31-bit SDK for z/OS V8 - IBM 64-bit SDK for z/OS V8 Java V11	All service through the end of November 2023 not already marked RSU.
WebSphere Application Server for z/OS V9 – Service level 9.0.5.16 V8.5 – Service level 8.5.5.24	All service through the end of November 2023 - Java 8, build 8.0.8.15 - pmz6480sr8fp15-20231030_01 All service through the end of November 2023 - Java 8, build 8.0.8.5 - pmz3180sr8fp5-20230418_01
- IBM MQ V9.3.4 CD - IBM MQ V9.3.0 LTS - IBM MQ V9.2.0 LTS	All service through the end of September 2023 not already marked RSU. PE resolution and HIPER/Security/Integrity/Pervasive PTFs and their associated requisites and supersedes through the end of November 2023.
- z/OS V2R4 - z/OS V2R5 - z/OS V3.1	All service through the end of September 2023 not already marked RSU. PE resolution and HIPER/Security/Integrity/Pervasive PTFs and their associated requisites and supersedes through the end of November 2023.

Consolidated Service Test

Roll-out of CST4Q23:

IBM recommends that the Customer stage the roll-out of the quarterly recommended service upgrade (RSU) by product on any single system, and not change all the major products (such as z/OS, DB2, IMS, CICS, GDPS, Java, IBM MQ, WebSphere Application Server for z/OS) all at once. Changing all the major products in a single system simultaneously complicates the tasks of problem diagnosis and back-out if a severe problem occurs.

Additionally, IBM recommends that the Customer thoroughly test the maintenance level applied, including testing in a parallel sysplex application data sharing environment.

IBM makes this recommendation based on our testing in the environment described in this report. Your environment and applications are likely to differ in numerous ways. Therefore, your results may be different than ours. The Customer must consider their environment, their maintenance philosophy and their production needs in making the final decision on what maintenance to apply, and how you roll this maintenance out in your environment.

What's New

As part of IBM's continuing efforts to provide Customers with suggestions on maintaining their z/OS systems for availability, we have provided a new document which describes a *z/OS Preventive Maintenance Strategy to Maintain System Availability*.

A link to the document can be found on the "mission" page of the CST website:

Highlights of CST4Q23

This quarterly CST focused on enhancements to the environment and workloads. This included:

- Additional product(s)
- Additional tool(s)
- Additional product / tool scenarios
- Additional workloads / applications

Consolidated Service Test

- Workloads run continuously
- Service applied, as needed

Some highlights follow:

- CICS/TS
 - (In Progress) enabled CICSplex/SM ability to store and provide task history
 - (In Progress) Enhancements to increase the amount of encrypted TCP/IP traffic including ATLS in our environment
- IMS
 - (In Progress) IBM z Pervasive Encryption – Setup and run IMS Workload with encrypted IMS datasets.
- z/OS:
 - (Completed) Migrations to z/OS V3.1
 - (Ongoing) Working on Pervasive Encryption
- CICS, Db2, GDPS, IMS, IBM MQ, WAS, and z/OS recovery scenarios performed

Problems Encountered during CST4Q23:

The APARs listed in the table below represent the problems the CST team encountered during the quarterly test; however, if a problem was encountered and corrected for this recommendation, it will not be listed in the table below. The APARs listed below are either open, or their associated PTFs were not yet available for testing in the CST environment prior to this recommendation.

Customers should verify APAR status through normal means.

Note: Consolidated Service Test does not replace the regular service procedure. If a problem is encountered with product code, you should report the problem to IBM support.

CICS/TS 5.6	
PH58481	CICS Trace Points AP F948 and AP F949 not recognized when formatting
CS/390 2.5	
PH58956	Abend0C4 in EZBITDCR accessing TCBDYING in SRB mode

Consolidated Service Test

GDPS 4.5	
PH57139	A production system should not be allowed to run a script that targets itself
IMS V15	
PH48219	IMS hang during rebuild of OSAMCACHE structure in CF after issuing "SETXCF START,REALLOCATE" command
z/OS V3.1	
OA65753	GEO2740W unexpected Host Access by LPARs after IOSHS0024I

How is the Customer going to obtain and install the CST4Q23 level of service?
